

I strongly oppose BPL. -1- BPL is unnecessary, as most of the public already has access to high-speed DSL via telephone lines and, in most areas, cable-modem, too. -2- BPL is strongly opposed by the military; see their open letter of opposition. -3- BPL will ruin international shortwave broadcast reception, which I value and enjoy daily. -4- It seems clear that the only reason *for* BPL is that the power industry wants to get in on the Internet boom. That's no reason that we should give in to their destructive desire. -Thanks for your attention.
